EDUCATION

Central University Bilaspur Chhattisgarh **JUL 2024 – JUL 2028**
B.Tech - Information Technology - ***CGPA - 8.16*** *Bilaspur, Chhattisgarh*

TECHNICAL SKILLS

Programming Languages: Java, Python, TypeScript, SQL, JavaScript
Frameworks & Libraries: Next.js (App Router, RSC, SSR), React.js, Express.js, Inngest, Prisma, Tailwind CSS
Tools & Platforms: Node.js, Clerk, Git, GitHub, Vercel
Databases: PostgreSQL, MongoDB, Neon

PROJECTS

Projectory – Product Launch Platform **May 2026**

- Engineered a full-stack **product discovery and launch platform** with Next.js 16 App Router, React 19 Server Components, and Server Actions, supporting product submission, community voting, discovery, and admin moderation.
- Designed a **PostgreSQL** data layer with Drizzle ORM, 3-state moderation workflow, and dedicated indexes on slug, status, and organization ID for efficient catalog and organization-scoped queries.
- Implemented an atomic **PostgreSQL voting engine** with optimistic UI updates and database-level vote clamping, avoiding read-modify-write operations for concurrent vote mutations.
- Enabled **Next.js Cache Components** and partial prerendering with **15-minute revalidation**, combining cached catalog reads with streamed dynamic content through Suspense boundaries.
- Enforced **10 security protections** including Clerk authentication and organization checks, admin authorization, Zod validation, parameterized Drizzle queries, and server-only database access.

Viora – Smart Project Management Platform **July 2026**

- Architected a multi-tenant **project management platform** using React 19, Express 5, and Prisma ORM, with a relational schema spanning **7 core entities** and cascading deletes for data integrity.
- Implemented **3-tier RBAC** across Workspace Admin, Project Team Lead, and Project Member roles, securing **10+ REST endpoints** for workspace, project, task, and collaboration operations.
- Built event-driven **Inngest workflows** with `step.sleepUntil()` for per-task deadline reminders and webhook-based synchronization between Clerk and PostgreSQL, eliminating cron-based polling.
- Integrated a serverless **Neon PostgreSQL WebSocket adapter** for reliable database connectivity on Vercel and automated task-assignment emails using **Nodemailer/Brevo SMTP**.
- Developed interactive **analytics dashboards** and calendar-based task tracking with Recharts, supporting task-status, issue-type, and priority analysis with **10-second discussion synchronization**.

SupportAI – Embeddable AI Support **Aug 2026**

- Engineered a **multi-tenant AI customer support platform** with Next.js 16 and Gemini, enabling businesses to deploy a **zero-dependency JavaScript widget** on external websites through a single script tag.
- Developed an end-to-end **AI support pipeline** connecting the embeddable widget, CORS-enabled API, MongoDB knowledge base, and **Gemini 3.6 Flash** for context-aware customer responses.
- Designed **5 AI guardrails** covering source-of-truth enforcement, anti-hallucination rules, prompt-injection defense, out-of-scope support routing, and conflict-aware response handling.
- Protected **6 API handlers** spanning OAuth authentication, business configuration, and cross-origin AI chat, secured with Scalekit HTTP-only sessions, middleware protection, and Zod validation.
- Built an **XSS-safe vanilla JavaScript widget** with asynchronous API communication, typing indicators, responsive UI injection, and graceful handling of network and configuration failures.

AWARDS & ACHIEVEMENTS

- Solved **490+ DSA problems** on LeetCode across Arrays, Strings, Trees, Graphs, Dynamic Programming, and SQL; maintained a **405-day streak** and earned the LeetCode **365 Days badge**.
- Built and led a **70+ member Discord community** for developers to share projects, collaborate, and discuss web development.
- Open Source & Competitive Programming Member, Google Developer Groups on Campus (GDGC) — Guru Ghasidas Vishwavidyalaya.
